

Barclays Bank Customer Churn Analysis Dashboard

Project Overview

Customer retention is a key driver of long-term profitability in the banking industry. This Power BI dashboard provides a comprehensive analysis of customer churn at Barclays Bank by transforming raw customer data into meaningful business insights.

The dashboard explores customer demographics, financial behavior, account activity, and product usage to uncover the factors that contribute to customer attrition. By identifying high-risk customer segments, the analysis supports data-driven decision-making and helps the business develop effective customer retention strategies.

Business Objectives

- Analyze the overall customer churn rate.
- Identify customer segments with the highest churn risk.
- Understand the impact of demographic and financial factors on churn.
- Evaluate customer engagement and account activity.
- Support strategic decisions to improve customer retention and reduce revenue loss.

Tools & Technologies

Category	Tools
Data Visualization	Power BI
Data Transformation	Power Query
Data Modeling	Power BI Data Model
Calculations	DAX (Data Analysis Expressions)
Data Source	Excel / CSV

Key Performance Indicators (KPIs)

-  Total Customers
-  Total Churned Customers
-  Active Customers

-  Customer Churn Rate (%)
 -  Average Account Balance
 -  Average Credit Score
 -  Average Estimated Salary
 -  Average Number of Products
 -  Average Customer Tenure
-

Dashboard Highlights

The dashboard enables users to:

- Monitor overall customer churn performance through interactive KPIs.
 - Compare churn rates across different countries and customer demographics.
 - Analyze churn by age group, gender, credit score, and account balance.
 - Evaluate the relationship between customer activity and churn behavior.
 - Identify whether customers with multiple banking products are more likely to stay.
 - Explore customer trends using dynamic filters and slicers for deeper analysis.
-

Key Business Insights

- Customers with lower engagement levels exhibited a significantly higher likelihood of churn.
 - Customer age and tenure showed noticeable patterns in retention behavior.
 - Geographic analysis revealed differences in churn across regions.
 - Credit score and account balance provided valuable indicators of customer loyalty.
 - Product ownership played an important role in customer retention.
 - Interactive filtering allows stakeholders to investigate specific customer segments and business scenarios.
-

Business Value

This dashboard empowers decision-makers to:

- Improve customer retention through data-driven strategies.
 - Detect high-risk customers before they churn.
 - Optimize marketing and retention campaigns.
 - Enhance customer experience by understanding behavioral patterns.
 - Support executive reporting with interactive, real-time business intelligence.
-

Skills Demonstrated

- Data Cleaning & Transformation

- Data Modeling
 - DAX Measures & Calculated Columns
 - Interactive Dashboard Design
 - KPI Development
 - Business Intelligence Reporting
 - Customer Churn Analysis
 - Data Storytelling
 - Business Insight Generation
